"The title of this report, formerly "National Guidelines for Death Investigation," has been changed in this reprint for consistency with the titles of other guides in the NIJ series." This 81 page report presents the results of a study of the Hurricane fault in Utah. A thorough understanding of the scientific investigation is perhaps one of the strongest foundations a child can have. This book explains every step of the process, from the creation of hypothesis to drawing a conclusion. To facilitate active learning and maximum retention, examples are provided too. The last part of the book includes tips to better remember the steps discussed in the previous chapters. The term "mathematics" usually suggests an array of familiar problems with solutions derived from well-known techniques. Discovering Mathematics: The Art of Investigation takes a different approach, exploring how new ideas and chance observations can be pursued, and focusing on how the process invariably leads to interesting questions that would never have otherwise arisen. With puzzles involving coins, postage stamps, and other commonplace items, students are challenged to account for the simple explanations behind perplexing mathematical phenomena. Elementary methods and solutions allow readers to concentrate on the way in which the material is explored, as well as on strategies for answers that aren't immediately obvious. The problems don't require the kind of sophistication that would put them out of reach of ordinary students, but they're sufficiently complex to capture the essential features of mathematical discovery. Complete solutions appear at the end. The most challenging parts of teaching mathematics are engaging students and helping them understand the connections between mathematics concepts. In this volume, you'll find a collection of low floor, high ceiling tasks that will help you do just that, by looking at the big ideas at the fifth-grade level through visualization, play, and investigation. During their work with tens of thousands of teachers, authors Jo Boaler, Jen Munson, and Cathy Williams heard the same message—that they want to incorporate more brain science into their math instruction, but they need guidance in the techniques that work best to get across the concepts they needed to teach. So the authors designed Mindset Mathematics around the principle of active student engagement, with tasks that reflect the latest brain science on learning. Open, creative, and visual mathematics tasks have been shown to improve student test scores, and more importantly change their relationship with mathematics and start believing in their own potential. The tasks in Mindset Mathematics reflect the lessons from brain science that: There is no such thing as a math person - anyone can learn mathematics to high levels. Mistakes, struggle and challenge are the most important times for brain growth. Speed is unimportant in mathematics. Mathematics is a visual and beautiful subject, and our brains want to think visually about mathematics. With engaging questions, open-ended tasks, and four-color visuals that will help kids get excited about mathematics, Mindset Mathematics is organized around nine big ideas which emphasize the connections within the Common Core State Standards (CCSS) and can be used with any current curriculum. Science Lessons & Investigations presents science learning through in-depth investigation and observation, supporting Next Generation Science Standards (NGSS). Each unit guides students through exploring a science concept and includes hands-on activities to extend learning. This robust teaching resource gives you everything you need, including teacher support pages, informational text and graphics, vocabulary review, reading and writing activities, and hands-on science projects. Students apply science, technology, engineering, and math concepts to solve real-world problems. Each of the 15 units focuses on a hands-on challenge in which students work together as engineers to design, prototype, test, and refine their creations. Topics support NGSS. Book jacket.
