Written by two experienced psychology teachers, this is the second edition of *Psychology Sorted Book 1*, in the recent series for students and teachers. It is structured to help them understand and select from the wealth of psychological research that is relevant to the IB Diploma Psychology syllabus. The book has been developed independently of the International Baccalaureate Organization (IB), which in no way endorses it. However, the topics and content are especially chosen to be relevant to the 2019 IB Diploma psychology curriculum, while also providing useful support to teachers and students of other curricula, including those taught as part of university courses. This second edition has been updated to include new material suggested by the IB in December 2019. The book provides organised overview grids suggesting classic and recent key studies for the core biological, cognitive and sociocultural approaches. Links are made between content and studies from other areas, including the options. There are hyperlinks and details for further relevant resources, journal articles and media talks and summaries of every study, written in clear language and including evaluation points. The authors have also included critical thinking suggestions for each topic and a full bibliography and author index. Further support is available from the authors' *Psychology Sorted* blog

and their Psychology Sorted Facebook page In this instant New York Times bestseller, Angela Duckworth shows anyone striving to succeed that the secret to outstanding achievement is not talent, but a special blend of passion and persistence she calls "grit." "Inspiration for non-geniuses everywhere" (People). The daughter of a scientist who frequently noted her lack of "genius," Angela Duckworth is now a celebrated researcher and professor. It was her early eye-opening stints in teaching, business consulting, and neuroscience that led to her hypothesis about what really drives success: not genius, but a unique combination of passion and long-term perseverance. In *Grit*, she takes us into the field to visit cadets struggling through their first days at West Point, teachers working in some of the toughest schools, and young finalists in the National Spelling Bee. She also mines fascinating insights from history and shows what can be gleaned from modern experiments in peak performance. Finally, she shares what she's learned from interviewing dozens of high achievers—from JP Morgan CEO Jamie Dimon to New Yorker cartoon editor Bob Mankoff to Seattle Seahawks Coach Pete Carroll. "Duckworth's ideas about the cultivation of tenacity have clearly changed some lives for the better" (The New York Times Book Review). Among *Grit's* most valuable insights: any effort you make ultimately counts twice toward your goal; grit can be learned, regardless of IQ or circumstances; when it comes to child-rearing, neither a warm embrace nor high standards will work by themselves; how to trigger lifelong interest; the magic of the Hard Thing Rule; and so much more. Winningly personal, insightful, and even life-changing, *Grit* is a book about what goes through your head when you fall down, and how that—not talent or luck—makes all the difference. This is "a fascinating tour of the psychological research on success" (The Wall Street Journal). Comprehensively updated for the latest syllabus, for first teaching September 2017, and developed directly with the IB, the second edition of this popular Psychology Course Book provides thorough coverage of all core and optional units at Standard and Higher Level, as well as assessment preparation support. Engaging, full-colour activities and in-depth, international case studies bring the theory to life, while structured opportunities for critical thinking and concept-based learning help to develop enquiring and independent learners. Kahneman's work with Amos Tversky is the subject of Michael Lewis's The Undoing Project: A Friendship That Changed Our Minds

In his mega bestseller, Thinking, Fast and Slow, Daniel Kahneman, the renowned psychologist and winner of the Nobel Prize in Economics, takes us on a groundbreaking tour of the mind and explains the two systems that drive the way we think. System 1 is fast, intuitive, and emotional; System 2 is slower, more deliberative, and more logical. The impact of overconfidence on corporate strategies, the difficulties of predicting what will make us happy in the future, the profound effect of cognitive biases on everything from playing the stock market to planning our next vacation—each of these can be understood only by knowing how the two systems shape our judgments and decisions. Engaging the reader in a lively conversation about how we think, Kahneman reveals where we can and cannot trust our intuitions and how we can tap into the benefits of slow thinking. He offers practical and enlightening insights into how choices are made in both our business and our personal lives—and how we can use different techniques to guard against the mental glitches that often get us into trouble. Winner of the National Academy of Sciences Best Book Award and the Los Angeles Times Book Prize and selected by The New York Times Book Review as one of the ten best books of 2011, Thinking, Fast and Slow is destined to be a classic.
